Professional Summary

AI and Machine Learning graduate with academic grounding in Natural Language Processing, Transformer architectures, and machine learning fundamentals, combined with hands on experience building fullstack, AI-integrated applications using Python, TypeScript, and generative AI APIs. Experienced in LLM integration, prompt driven application design, and end to end web development, with a strong interest in applied AI engineering and deployment oriented development.

Technical Skills

Programming Languages: Python, SQL, TypeScript
AI & Machine Learning: Machine Learning Fundamentals, Natural Language Processing (NLP), Transformer Architectures, Generative AI, LLM Integration (Google Gemini, Anthropic Claude), Prompt Engineering
Web & Backend Development: Next.js, React, REST APIs, Firebase, Tailwind CSS
Other: Power BI, Git/GitHub, Debugging & Testing

Projects

Veritas AI - AI Powered Plagiarism Detection Web App May 2025 - September 2025
Personal Project | Next.js, TypeScript, React, Google Gemini AI, Genkit

- Built a full-stack AI powered plagiarism detection application using Next.js, React, and TypeScript, enabling users to analyse text for originality in real time.
- Integrated Google Gemini 2.0 Flash via the Genkit generative AI framework to perform automated web based content analysis, returning plagiarism scores, uniqueness scores, and matched source citations.
- Designed a type safe AI pipeline using Zod schema validation to structure and validate LLM inputs/outputs, ensuring reliable JSON-based AI responses.
- Developed a responsive, accessible UI with Tailwind CSS, Radix UI, and shadcn/ui components, including real-time form validation via React Hook Form.
- Implemented client-side report generation, allowing users to export plagiarism analysis reports as downloadable text files.
- Configured Firebase backend integration and deployment pipeline (Firebase App Hosting) for scalable hosting.
- Applied modern software engineering practices including component-based architecture, server actions, async data fetching, and responsive design principles.

Experience

Software Developer Intern, Think Future Technologies March 2023 - May 2023

- Developed and optimized Python-based modules for data processing and application functionality.
- Assisted in data validation, testing, and debugging to ensure data quality and system performance.
- Worked in Agile teams, contributing to sprint planning, task execution, and collaborative development cycles.

Education

University of Birmingham September 2024 - September 2025
PGD in Artificial Intelligence and Machine Learning

Maharaja Surajmal Institute October 2020 - July 2023
Bachelor of Computer Applications (BCA)
